OBJECTIVE

AI & ML undergraduate with experience in artificial intelligence, machine learning, industry research, and AI-powered product development. Built projects ranging from multi-agent AI systems and productivity tools to machine learning and computer vision applications. Seeking opportunities to contribute to intelligent systems, AI products, and technology-driven innovation.

EDUCATION

B.Tech in AI and ML, JG University

Aug 2024 - Present

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Artificial Intelligence, Machine Learning, Probability & Statistics

EXPERIENCE

Industry Research Intern

Apr 2026 – Jun 2026 (Ongoing)

Ahmedabad Management Association (AMA)

- Conducted AI transformation research across 8 major industries by mapping value chains, operational workflows, and technology adoption trends.
- Identified AI intervention opportunities across business functions and evaluated potential impact on productivity, efficiency, and decision-making.
- Analyzed AI adoption initiatives undertaken by leading companies and documented implementation drivers, use cases, and business outcomes.
- Validated and synthesized secondary research data into structured datasets and industry intelligence reports.
- Produced strategic reports covering AI landscape, competitive benchmarking, future opportunities, and industry-specific insights.

PROJECTS

EchoOS – AI Operating System for Research, Strategy, Validation & Execution ([Try it here](#))

- Designed an AI operating system that transforms objectives into research, strategy, validation, and execution plans through coordinated AI agents.
- Architected a multi-agent workflow comprising Research, Strategy, Memory, Reality, Reflection, Execution, and Supervisor agents.
- Built using React, Vite, Firebase, Cloud Firestore, and Gemini-powered AI workflows; submitted to the Google for Startups × Antler Immersion Program.

EchoNote – AI Transcription and Productivity System ([Try it here](#))

- Built an AI-based prototype using Google AI Studio to convert conversations into structured insights.
- Designed workflows for improving information extraction and productivity.
- Entrepreneurship project sponsored by ASK Investment Managers Limited.

OCR Model (Python)

- Developed a CNN-based handwritten character recognition model using EMNIST dataset
- Implemented preprocessing and classification pipeline

Stock Market Prediction (Python) ([Try it here](#))

- Built a basic ML pipeline for short-term trend prediction
- Applied preprocessing, feature selection, and model evaluation techniques

RailQ – Smart Railway Experience Prototype ([Try it here](#))

- Designed a passenger-centric system for coach navigation, hygiene reporting, and safety features
- Structured solution flow and contributed to prototype development

Instagram Feature Redesign ([View it here](#))

- Used prompt-based prototyping (Google AI Studio) to explore improved feature flows
- Refined user interaction and interface usability

Sudoku Solver and Generator (C) ([Try it here](#))

- Designed a configurable Sudoku engine (4×4, 9×9) using backtracking and constraint validation
- Ensured unique puzzle generation using solution-count verification
- Implemented hint system using logical techniques (Naked and Hidden Singles)

DSA Visualizer (C) ([Try it here](#))

- Created a console-based tool to visualize core data structures
- Improved algorithm understanding and debugging clarity

Resume Builder (Java) ([Try it here](#))

- Built a template-based system to generate structured resumes dynamically

SKILLS

Programming -	C, C++, Java, Python, SQL
AI/ML -	Machine Learning, Generative AI, Prompt Engineering, CNNs, Data Preprocessing, Feature Engineering, Model Evaluation
Data Analysis -	Secondary Research, Data Validation, Structured Analysis, Competitive Benchmarking
Core CS -	Data Structures, Algorithms, Backtracking, Problem Solving, Debugging
Tools -	Google AI Studio, Antigravity IDE, GitHub, VS Code, Figma, Canva
Design -	UI/UX, Product Thinking, Prototyping

ACHIEVEMENTS AND CERTIFICATIONS

- Selected for Google for Startups & Antler Immersion Program (2026) focused on building defensible AI startups
- Shortlisted among Top 10 teams at LaunchPad Event; invited to Scaler School of Technology, Bangalore, for startup pitching
- IELTS Academic: Band 7.0 (CEFR C1)
- HackerRank Badges: C, C++, Python, Java
- Canva Visual Suite Certification

EXTRA-CURRICULAR ACTIVITIES

- Participated in Royal Hackathon (2024) – computer vision-based project
- Actively exploring AI systems, automation, and product design
